Electronics Explore Tasks:

I reckon it's always good to have a bit of interest in the subjects you study and you eventually may want to devote some of your working life to. Electronics is a subject that is everywhere and involved in everything. You make like to take on some of these tasks to get a bit of perspective or you may like to use your own brain to decide what you're interested in. I'd be interested to see any outcomes.

Spacex is miraculous. Why?	Tell me why self- driving cars won't be in widespread use any time soon.	What has electronics ever done for us? For good, or for bad.
Find any old device at home. Work out/ find out how it interacts with the real world.	How is an Integrated Circuit made? I don't know. Perhaps you can find out.	How does the production of microchips affect the balance of power between nations?
